Developments in international trade and industrial production

- April 2013: world trade up 1.4% month on month, following a 0.1% decrease in March.
- April 2013: world industrial production up 0.2% month on month, following a 0.4% increase in March.

World trade volume

Based on preliminary data, the volume of world trade increased 1.4% in April from the previous month, following a revised 0.1% decrease in March. Both import and export volumes went up in the United States and the Emerging Economies, whereas these decreased in the Euro Area. The trade balance in Japan improved, with a slightly moderated export growth and a decline in imports. Substantial turnarounds occurred in the United States, the Euro Area, Central and Eastern Europe and Africa and the Middle East.

Because of the volatility of monthly trade figures, momentum is the preferred measure of trade growth.¹ Trade momentum decreased to 0.2% in April (non-annualized). Trade momentum is relatively high in Japan, in Central and Eastern Europe and in Latin America.

World industrial production

According to preliminary data, world industrial production grew by 0.2% in April, following a revised 0.4% increase in March. While growth was negative in the United States and Asia, it picked up in Japan, Africa and the Middle East. Growth declined in the Euro Area.

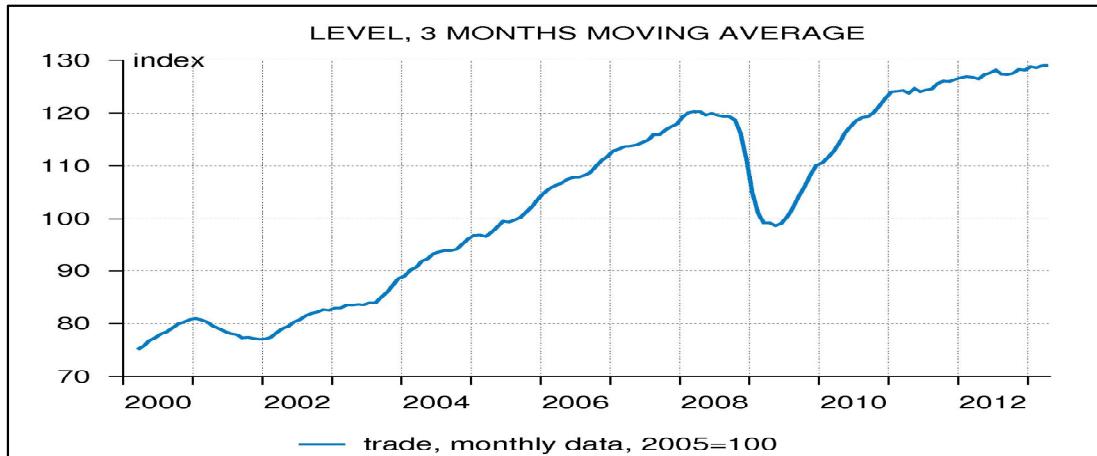

Global production momentum was up 0.8% in April (non-annualized). Momentum increased in the Euro Area to 0.9%. Momentum was slightly negative in Africa and the Middle East.

The next release of the CPB World Trade Monitor is scheduled tentatively for 24 July 2013. The WTM database in Excel format is available at:

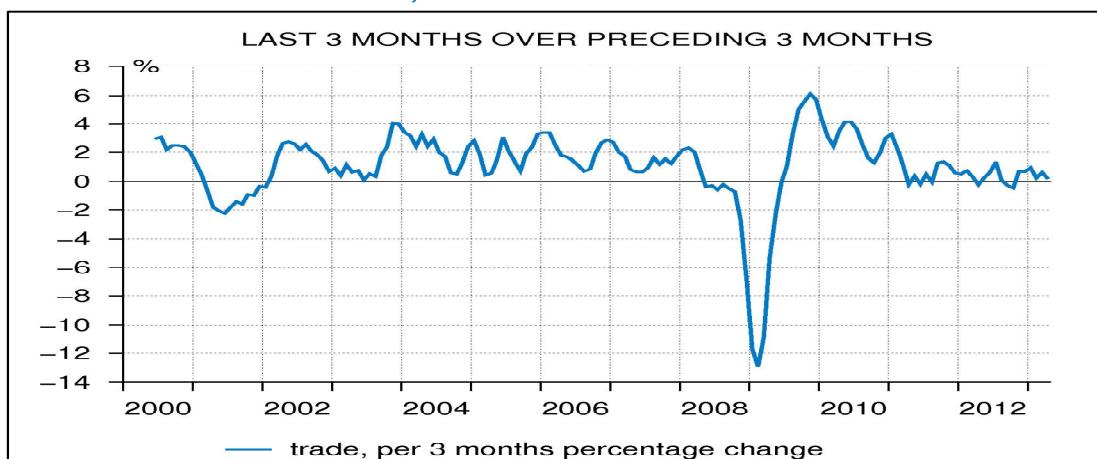

<http://www.cpb.nl/en/world-trade-monitor>

¹ Momentum is the change in the three months average up to the report month relative to the average of the preceding three months.
