(a) The revision of the National Accounts by Statistics Netherlands is incorporated in this outlook.

(b) The wage-rate market sector, labour-income share as well as private savings are biased upward for 2014 and 2015, due to the measure to limit the use of a so-called Stamrecht bv (severance pay insurance fund). Severance payments will be paid directly to the person involved, instead of into such a fund. After the revision of the National Accounts, severance payments are registered as employers' social security contributions. This translates into a non-recurring increase of the wage rate in 2014 which affects the development of the wages in the private sector well over 0.5% points
